

NRG Oncology Biospecimen Bank- San Francisco Kit Requests

* Required

NRG Study number(s): *

Please provide the NRG/RTOG Study number(s) for which you would like kits for, and how many kits for each study*. By default, we will send you one kit with all of the necessary supplies for all time points for each study listed (e.g. 1 serum, 1 plasma, 1 blood, 1 urine kit for BN001). You must have IRB approval in place before you request a kit. If you do not need a complete kit, please feel free to write "Additional supplies only".

* If your site has just opened a study, we will send a complete kit for one patient to start. You may request an additional kit as soon as your site begins to enroll patients on the study. We are currently sending a maximum of 2-3 complete kits per study per order for actively enrolling sites. Please feel free to request additional kits, as needed.

This is a required question:*

I can confirm that our site has IRB approval for this study in place

Date needed

Please plan to have kits on hand at least two days before the patient is scheduled to arrive. Kits will be shipped from California via FedEx Ground and received within 7-10 business days. If kits are needed sooner please include your site's FedEx account number in the "Notes" section below, as NRGBB-SF cannot pay to fulfill last-minute requests.

mm/dd/yyyy

Extra supplies

If you need any additional supplies, please check off the appropriate boxes below. Please specify quantity in the Additional Notes/Comments.

Batch Shipping Label - (we cannot provide shipping labels for single time points)

Slide holder(s)

FFPE block punch

Other:

Your FedEx shipping address *

Please let us know who and to where the package should be addressed. You must include a room or suite number.

Your Phone Number *

Your Email Address *

Can you ship frozen specimens to us in batches? *

Note: For NRG trials we can only provide ONE label per case for batch shipments. Labels may NOT be reused. They are to be used only once. You may ship more than one case in your shipments. We require sites to store specimens at -80°C (-70°C to -90°C) and ship them to us in batches. This helps reduce Styrofoam waste. We will send only one large Styrofoam shipping container per kit request. Note: if you are unable to ship in batches but are willing to provide your own Styrofoam shipping boxes for subsequent shipments, please select 'yes'.

Yes

No

Additional Notes/Comments
